Linxi Li

Senior UX Designer · Enterprise Platforms & Complex Systems

hellolinxi.com · linkedin.com/in/lilinxi · Linxi_Li@outlook.com · +86 159 2129 4126 · Shanghai, China

8+ years of experience turning complex workflows into digital products, spanning enterprise platforms, healthcare software and fintech tools. Led UX design from concept to launch for Apple's production-ramp monitoring system, designed medical software deployed in 10+ hospitals at Philips, and developed UX solutions for PayPal's risk management platform.
MSc, TU Delft · iF & Red Dot design awards · Mandarin (native), English (fluent).

EXPERIENCE

Apple · UX Designer (On-site Vendor) — Sep 2025 – Aug 2026 · Shanghai

- Led 0→1 UX design for Apple's new-product production-ramp monitoring system, consolidating data from Excel, email and weekly reports exceeding 100 pages into **an alert-first dashboard and key metric visualizations**. Helped management quickly identify cross-product risks and improve reporting efficiency, moving from weekly production reports to updates completed in minutes.
- Established consistent interaction patterns and visual standards for **18 modules**, initially working independently and later with another designer. Clarified requirements and aligned designs with **11+ product managers**; collaborated with frontend and backend engineers on implementation. Phase 1 launched, with a UX framework established for Phase 2.
- Designed and helped release new features for **three supply chain management tools** already in use: a production-line setup data platform v2.0 and two supply-chain operations platforms covering input/output, capacity, delivery planning and shipping.

Freelance · Independent UX Designer — Feb 2023 – Aug 2025 · Shanghai

- **Emergo by UL** — Supported summative usability validation for a modular surgical robotic system to support an NMPA registration amendment. Reviewed surgical instrument test training materials; helped observe and document **14 simulated surgical test sessions involving 57+ clinical professionals**, summarize findings and organize test materials.
- **PayPal** — Designed UI/UX for a product-launch risk management platform. Used a planetary-system **visual metaphor** to represent risks and controls, helping users find existing controls, compare similar products and simulate control combinations to develop risk management plans.
- **Chenhui Venture Partners** — Designed an AI conversational game **simulating startup challenges** to engage potential partners. Worked with investment professionals to turn common pitch and investment interview topics into AI personas, conversation flows and game mechanics; collaborated with engineering and brand team to launch it on the company website.

Philips · Senior UX Designer — Dec 2017 – Jan 2023 · Shanghai

Associate UX Designer (2017) → UX Designer (2019) → Senior UX Designer (2022)

- Designed information architecture and interactions for a radiology equipment data management system that replaced paper-based tracking boards and was later deployed in **10+ hospitals**. Delivered 0→1 UX for 3+ **medical tools** covering ultrasound report management, region-of-interest delineation in contrast imaging and maintenance scheduling.
- Evaluated PACS and imaging AI **usability**, identified use issues and proposed **design improvements** to support both products' initial NMPA registration submissions.
- Contributed to localization design for the Vue suite digital products (Carestream). Also designed a clinician learning mini-app, a self-service film-printing kiosk and a post-PCI care platform, building experience in **physical device and touchscreen interaction**, collaboration across user groups and service workflow design.
- Identified gaps in the global design system's support for **large screen displays**. Researched local designers' needs, identified six common design tasks and added large-screen design resources. Shared findings and proposed additions with the global design team, recommending **extensions to the design system**.
- Mapped sleep and respiratory care service journeys through field research with distributors and service partners.

EDUCATION

Delft University of Technology · MSc, Design for Interaction — 2015 – 2017 · Delft
Project: Excelscope 2.0, affordable malaria diagnosis for rural Uganda · exhibited at Dutch Design Week 2017

National Chengchi University · Exchange Program, Communication — 2014 · Taipei

Sun Yat-sen University · Bachelor's Degree, Creative Media — 2011 – 2015 · Guangzhou

SKILLS

Design	Enterprise UX · complex systems design · data visualization · design systems · video walls · physical interaction
Research	Co-creation workshops · field research · interviews · surveys · usability testing · service blueprints
Domains	Healthcare informatics · supply chain & manufacturing · fintech risk & controls · consumer IoT
Tools	Figma · Sketch · Framer · Axure · After Effects · Claude Code · Codex

AWARDS & PATENT

Design patent (GUI) · Medical-system event timeline — UI & UX design · CN307853843S — 2022
Red Dot: Design Team of the Year · Philips Experience Design Team — team member — 2022
Red Dot: Best of the Best & iF · Philips Nightowl baby monitor — companion mobile application UI & UX design — 2021, 2022
Red Dot & iF · Philips air purifier & rice cooker series — LED UI & physical interaction — 2018, 2019, 2021
iF Design Award · Philips Design Language System — additional large-screen design patterns — 2022
